

WANJOHI KELVIN MWANGI

Full Stack Developer | Software Consultant | Nairobi, Kenya

+254 740 252 837 • kelvinramsiel@gmail.com • <https://github.com/mwasobaddy>

PROFILE

Full stack developer with three years of professional and freelance experience designing, building and shipping production web applications across the public sector, commercial and non profit contexts in Kenya. Comfortable across the entire development lifecycle, from database design and backend API development through to responsive frontend interfaces and live server deployment. Builds primarily with Laravel, React, Vue.js, TypeScript and Node.js, with hands on experience integrating payment systems (Stripe, PayPal) and AI services. Brings an additional lens on data governance, digital rights and the practical gap between Kenya's Data Protection Act and how real applications are built, drawing on first hand experience as the developer making those implementation decisions.

SKILLS SUMMARY

Backend: PHP, Laravel, Node.js, Express, RESTful API design and integration, PHPUnit testing, CodeIgniter

Frontend: JavaScript (ES6+), TypeScript, React, Vue.js (Options & Composition API), Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Livewire

Databases: MySQL, PostgreSQL, MongoDB, SQLite, relational database design

Payments & Integrations: Stripe API, PayPal API, M-Pesa (integration experience), SMS and mailer APIs

Infrastructure & Tools: Git, live server deployment and configuration, server and firewall setup, Linux, network security, n8n workflow automation

Adjacent expertise: Data governance and digital rights (Kenya Data Protection Act), technical training and mentorship, technical reporting and strategy documentation.

SELECTED PROJECTS

Cadebeck HRM • *Laravel, React, MySQL*

- Built and delivered a full Human Resource Management System as a contracted developer, designing a REST API consumed by a React frontend for employee records, HR workflows and reporting
- Deployed and configured the application on a live production server, then resolved user reported issues post launch

Live: <https://www.cadebeckhr.com>

KeNHAVATE • *Laravel, Vue.js, React, MySQL, SQLite*

- Built and maintained Kenya National Highways Authority's idea submission and innovation evaluation platform, supporting both internal staff and external users
- Grew the system to over 100 registered users, 15 fully reviewed ideas, and one structured innovation challenge with over 10 participants
- Integrated security protocols, encryption and role based access control to protect departmental data across a government system

Live: (not fully launched by KeNHA)

SIGHT Lab (PWA) • *Next.js, TypeScript, ESLint, Husky*

- Built a privacy first, research grade Progressive Web Application to operationalise a somatic emotional regulation protocol through objective physiological measurement

- Established a fully typed Next.js codebase with ESLint linting and Husky pre commit hooks enforcing code quality at every commit

Live: <https://sight-app.vercel.app>

Code: <https://github.com/mwasobaddy/PWA>

QuickFolio • *PostgreSQL, Express, React, Node.js*

- Developed a digital records management system for KeNHA, building a Node.js and Express REST API over a PostgreSQL database
- Structured and uploaded over 500 institutional documents, replacing a manual paper based filing process

Live: <https://quick-folio-frontend.vercel.app>

Pelek Properties • *Laravel, Livewire, MySQL*

- Built a real estate management platform enabling efficient listing, tracking and management of rental properties for a commercial client
- Onboarded and maintains over 151 active property listings on the live system

Live: <https://pelekproperties.co.ke>

AI Invoice Generator • *MongoDB, Express, React, Node.js, Stripe*

- Designed and built an intelligent invoice management system end to end, integrating Stripe for billing and payment processing
- Implemented the REST API, MongoDB data schema and React frontend independently

Live: <https://ai-invoice-generator-ddxr.vercel.app>

George Missionaries • *React, PayPal API*

- Built a donations and outreach platform for a missionary organisation, integrating PayPal to enable online contributions and streamline fundraising

Live: <https://george-missions.vercel.app>

MaliManager (In Development) • *Laravel, React, MySQL, M-Pesa*

- Building a multi tenant SaaS rental and property management platform for the Kenyan market, integrating M-Pesa for local payment processing
- Architected as a scalable SaaS product supporting multiple landlords and agencies from a single codebase

Additional projects include: Harmonia AI (AI powered legal assistant, MERN), Kescrow (peer to peer escrow SaaS), Bidii Girls Programme, Indigenous Maasai Climate Adaptation Alliance and George Missionaries (community and advocacy platforms). Full portfolio available on GitHub.

EXPERIENCE

Freelance Full Stack Developer | Self Employed | *May 2025 to Present*

- Design, build and deploy full stack web applications end to end for direct clients across commercial, non profit and community sectors in Kenya
- Manage client relationships directly, translating business requirements into technical specifications and delivering independently across the full development lifecycle
- Configure and manage live hosting environments, integrate third party payment and AI services, and resolve post launch technical issues

Software Developer Intern | Kenya National Highways Authority (KeNHA) | *January 2024 to April 2025*

- Maintained KeNHAVATE across its full production lifecycle, growing user adoption and managing a live system supporting a government department
- Contributed technical input to the Research, Science, Technology and Innovation (RSTI) Strategy for the Department of Research, Innovation and Knowledge Management
- Built and maintained a SharePoint based digital library to support departmental records and knowledge management

Junior Software Developer Attache | Kenya National Highways Authority (KeNHA)
| *August 2023 to December 2023*

- Developed and tested KeNHAVATE modules using Laravel, Vue.js, React, MySQL and SQLite
- Integrated security protocols and encryption techniques to safeguard sensitive institutional and personal data

Junior IT Tutor Attache | Seda Tech Company Limited | *April 2023 to July 2023*

- Provided technical training on operating system installation, BIOS configuration and hardware upgrades for Windows and Linux environments
- Led workshops on database management, SMS and mailer API integration, equipping students with practical systems skills

Junior IT Technician Attache | Africa AI Labs | *January 2022 to April 2022*

Set up and configured servers, firewalls and IP CCTV systems to support company network infrastructure and security.

EDUCATION

Bachelor of Science in Applied Computer Science

Second Class Upper Division • Chuka University • September 2019 to November 2023

ADDITIONAL

Languages: English (proficient), Swahili

Interests: Data governance and digital rights in the African context, AI governance, the gap between Kenya's Data Protection Act and developer implementation practice

Availability: Open to full time, contract and part time engagements; immediately available
